

Quality Policy Statement

The management and staff of Global Composting Solutions recognise that an effective quality management system is necessary to provide and maintain the highest standards of quality relating to the design, build, installation and commissioning of HotRot's complete turnkey organic waste treatment plants. To this end we have established a QMS which satisfies the requirements specified in ISO 9001:2015. The system ensures prevention instead of reaction, continual improvement and clarity of process.

- With the system in place, HotRot's team have committed to:
- Providing products and services which meet operational performance standards and our customer's requirements in all respects.
- Ensuring our products and services meet the relevant industry specifications and regulatory requirements in our customer's jurisdiction.
- Establishing measurable company objectives which will be reviewed regularly.
- Reviewing the policy regularly to ensure its relevance and suitability to our organisational goals.

All staff are responsible and accountable for the success of the quality management system and are supported with personal training and professional development to achieve our quality objectives.

HotRot has an appointed management representative responsible for monitoring and ensuring the correct and effective implementation of the system.

Andrew Green
Chief Executive Officer
